```

Importing backend in API

The screenshot shows the Azure API Management console for the API 'import-apim-21837'. The 'Design' tab is selected, showing a visual representation of the API flow. The flow starts with 'Frontend', followed by 'Inbound processing' (which includes a 'Policies' section with a 'base' policy), then 'Backend' (which has an 'HTTP(s) endpoint' set to 'https://petstore.swagger.io/v2' and another 'Policies' section with a 'base' policy), and finally 'Outbound processing' (which also includes a 'Policies' section with a 'base' policy'). The 'All APIs' list on the left shows 'Swagger Petstore' as the selected API. The 'Operations' list on the right shows various operations like 'POST Add a new pet...', 'POST Create user...', 'POST Creates list of ...', 'DEL Delete purcha...', 'DEL Delete user...', 'DEL Deletes a pet...', 'GET Find pet by ID...', 'GET Find purchase ...', 'GET Finds Pets by s...', 'GET Finds Pets by t...', 'GET Get user by us...', 'GET Logs out cure...', 'GET Logs user into ...', and 'POST Place an order...'.

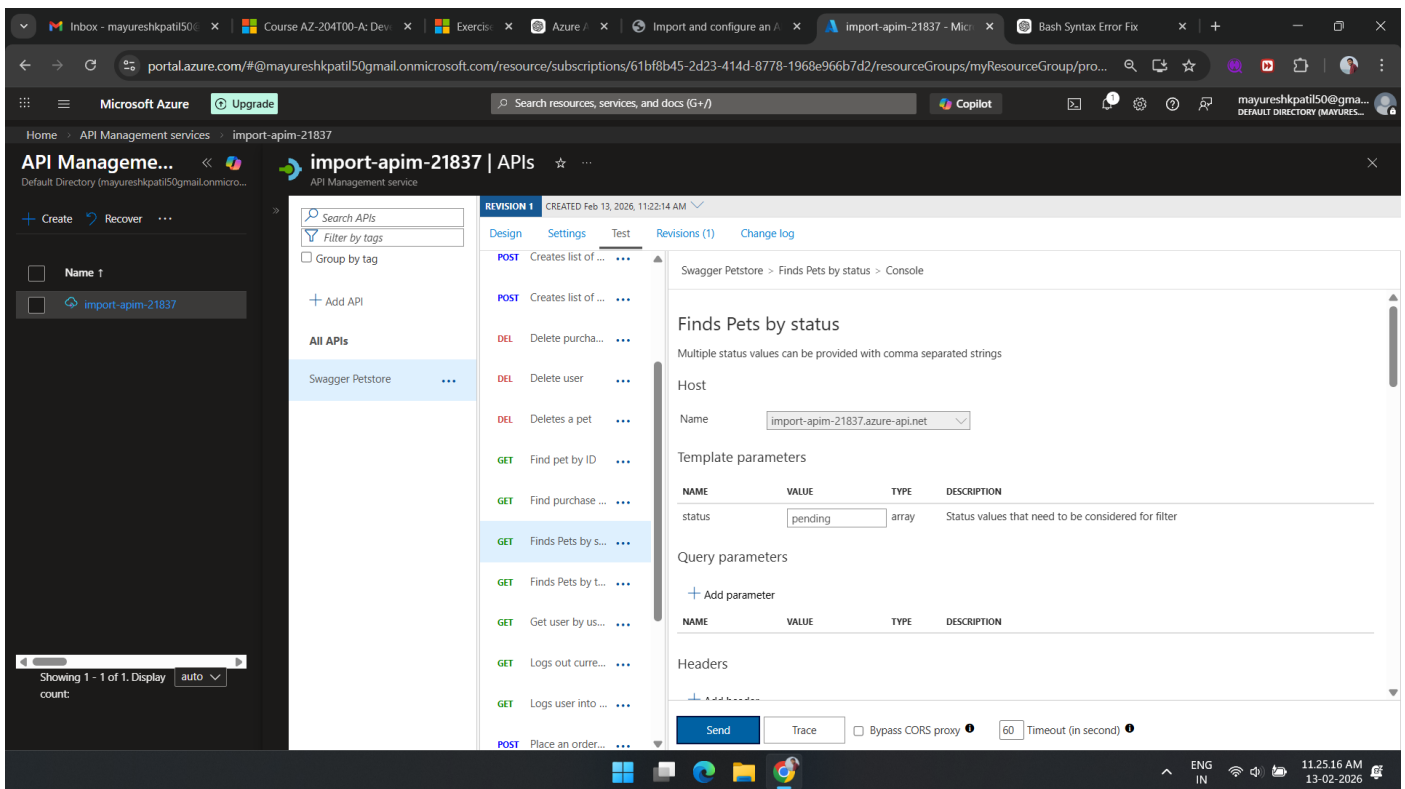

Test the API : Status field value = “available”

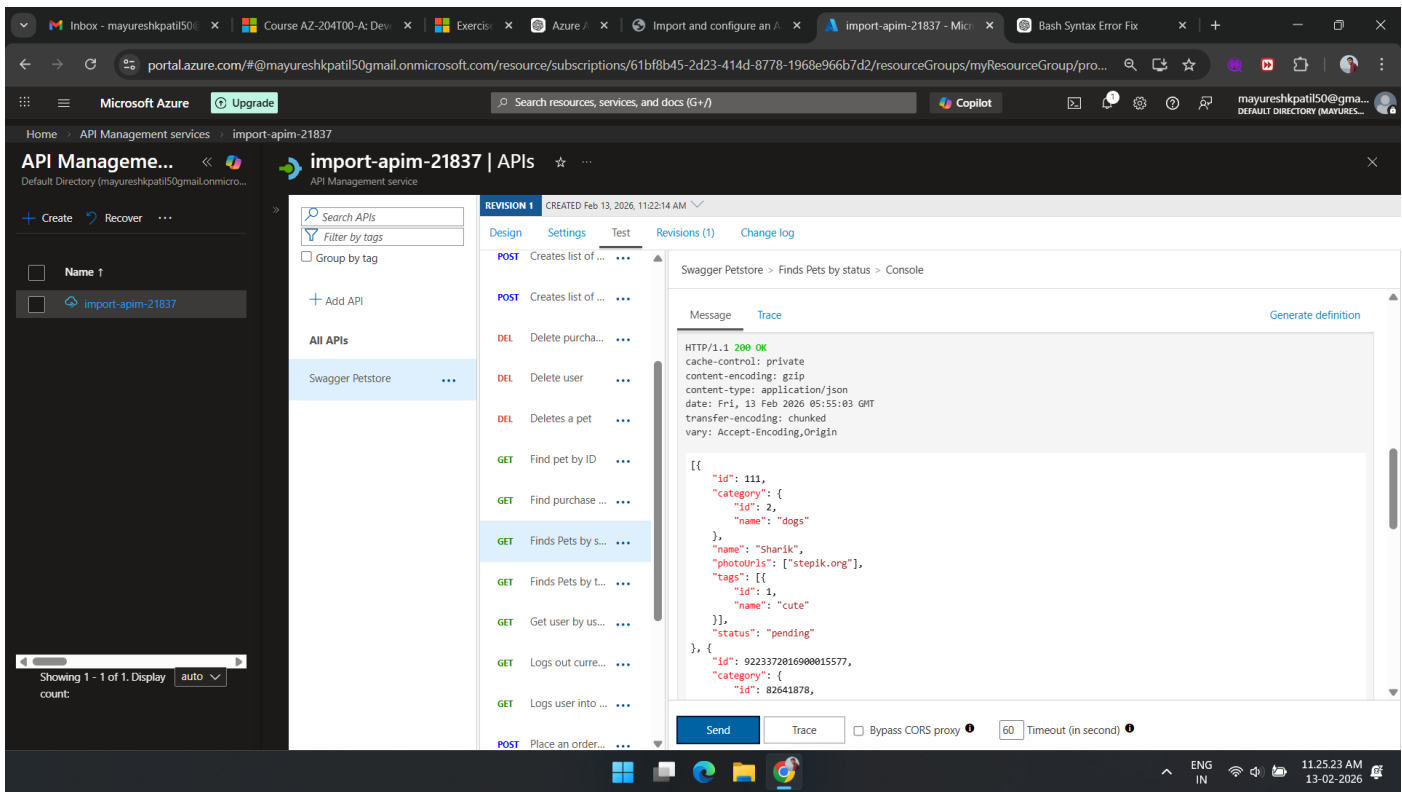

The screenshot shows the Azure API Management console for the API 'import-apim-21837'. The 'Test' tab is selected, showing the Swagger Petstore API definition. The 'GET Finds Pets by s...' operation is selected, and the 'Message' tab shows the response body. The response is a JSON object with a 'status' field value of 'available'. The response body is as follows:

```
{
  "id": 294038,
  "category": {
    "id": 294038,
    "name": "kangs name"
  },
  "name": "doggie",
  "photoUrls": ["kangs url"],
  "tags": [
    {
      "id": 294038,
      "name": "kangs tag 294038"
    }
  ],
  "status": "available"
}, {
  "id": 9223372016900015196,
  "category": {
    "id": 0,
    "name": "string"
  }
}
```

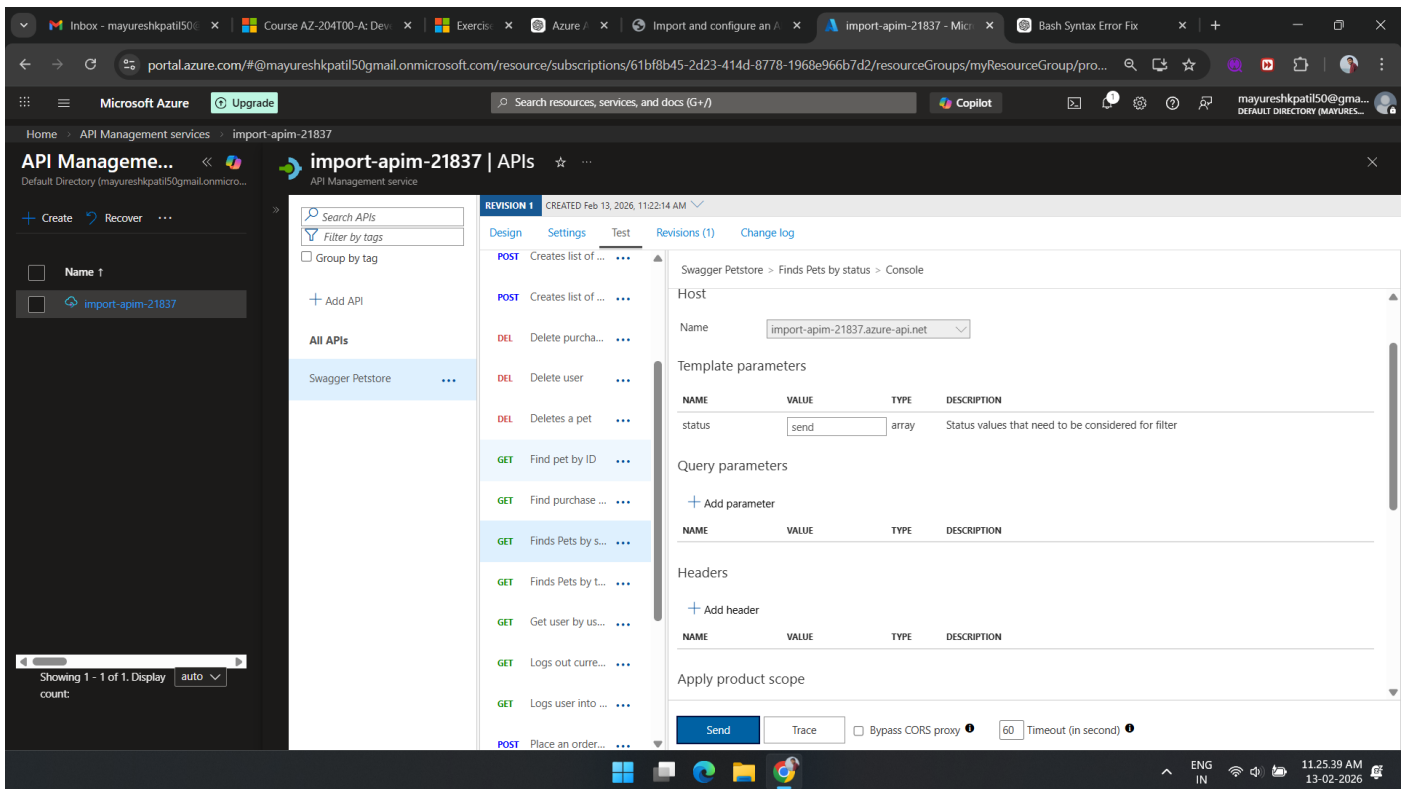

Status field value = “pending”

Status field value = “sold”

Exercise - Route events to a custom endpoint with Event Grid

The screenshot shows the Microsoft Azure portal interface with the user 'Mayuresh' logged in. The portal displays a 'Welcome back, Mayuresh' message and a credit balance of ₹18,348.82. Below the welcome message are four main action buttons: 'Start with a template', 'Create a resource', 'Build an AI agent', and 'Import code from GitHub'. At the bottom, a terminal window is open, displaying the following commands and output:

```
Bash
"Korea Central",
"Korea South",
"South Africa North",
"UAE North",
"Switzerland North",
"Germany West Central",
"West US 3",
"Sweden Central",
"Norway East",
"Qatar Central",
"Poland Central",
"Italy North",
"Israel Central",
"Spain Central",
"Mexico Central",
"Indonesia Central",
"Malaysia West",
"Chile Central",
"New Zealand North",
"Austria East",
"Belgium East"
},
"properties": null,
"resourceType": "partnerDestinations",
"zoneMappings": null
}
}
mayuresh [ ~ ]$ az provider show --namespace Microsoft.EventGrid --query "registrationState"
"Registering"
mayuresh [ ~ ]$
```

The screenshot shows the Microsoft Azure portal interface with the user 'Mayuresh' logged in. The portal displays a 'Welcome back, Mayuresh' message and a credit balance of ₹18,348.82. Below the welcome message are four main action buttons: 'Start with a template', 'Create a resource', 'Build an AI agent', and 'Import code from GitHub'. At the bottom, a terminal window is open, displaying the following commands and output:

```
Bash
mayuresh [ ~ ]$ az provider show --namespace Microsoft.EventGrid --query "registrationState"
"Registering"
mayuresh [ ~ ]$ az provider show --namespace Microsoft.EventGrid --query "registrationState"
"Registering"
mayuresh [ ~ ]$ az provider show --namespace Microsoft.EventGrid --query "registrationState"
"Registered"
mayuresh [ ~ ]$ az eventgrid topic create --name $topicName \
  --location $location \
  --resource-group $resourceGroup
{
  "dataResidencyBoundary": "WithinGeopair",
  "disableLocalAuth": false,
  "endpoint": "https://mytopic-ewgtopic-14436.centralindia-1.eventgrid.azure.net/api/events",
  "extendedLocation": null,
  "id": "/subscriptions/61bf8b45-2d23-414d-8778-1968e96b7d2/resourceGroups/myResourceGroup/providers/Microsoft.EventGrid/topics/mytopic-ewgtopic-14436",
  "identity": {
    "principalId": null,
    "tenantId": null,
    "type": "None",
    "userAssignedIdentities": null
  },
  "inboundRules": null,
  "inputSchema": "EventGridSchema",
  "inputSchemaMapping": null,
  "kind": "Azure",
  "location": "CentralIndia",
  "metricResourceId": "bec2a5a7-d905-430c-97cc-4293a6b9661f",
  "name": "mytopic-ewgtopic-14436",
  "privateEndpointConnections": null,
  "provisioningState": "Succeeded",
  "publicNetworkAccess": "Enabled",
  "resourceGroup": "myResourceGroup",
  "sku": {
    "name": "Basic"
  }
}
```

The screenshot displays a Windows desktop environment. At the top, a taskbar shows several open applications: Inboxes, Course AZ-2041, Develop event-l, Exercis, MS AZ, Route events to, Home - Microso, Azure Event Gr, and Explore Azure. The main window is a web browser with the address bar showing 'portal.azure.com/#home'. The browser's address bar and search bar are visible, along with the Microsoft Azure logo and an 'Upgrade' button. The search bar contains the text 'Search resources, services, and docs (G+/)'. The browser's address bar also shows the user's email address 'mayuresh.kpatil50@gmail.com' and the text 'DEFAULT DIRECTORY (MAYURES...)'. Below the browser window, a terminal window is open, displaying a Bash shell prompt. The terminal shows the following commands and output:

```
Bash [ ~ ] $ az eventgrid topic show --resource-group $resourceGroup \
--name $topicName --query "id" --output tsv

az eventgrid event-subscription create \
--source-resource-id $topicId \
--name $topicSubscription \
--endpoint $endpoint

If you are creating an event subscription from a topic that has "Azure" as the value for its "kind" property, you must validate your webhook endpoint by following the steps described in https://aka.ms/eg-webhook-endpoint-validation.

{

  "type": "Microsoft.EventGrid/eventSubscriptions"
}

mayuresh [ ~ ] $
```

The terminal window also shows a 'Terminal container button' in the top right corner. The bottom of the screen shows the Windows taskbar with the Start button, task view button, and several pinned applications: Edge, File Explorer, Chrome, and VS Code. The system tray in the bottom right corner shows the date and time as '2:00:44 PM 13-02-2026' and the language as 'ENG IN'.

Output:

The screenshot shows a web browser window with multiple tabs. The active tab is 'Azure Event Grid Viewer'. The address bar displays 'evgsite-14436.azurewebsites.net'. The page content includes the Azure Event Grid logo and the title 'Azure Event Grid Viewer'. Below this, there is a table with the following structure:

Event Type	Subject
Microsoft.EventGrid.SubscriptionValidationEvent	

Send an event with a .NET application

```
Bash
mayuresh [ ~ ] $ mkdir eventgrid
cd eventgrid
mayuresh [ ~/eventgrid ] $ dotnet new console

ENG IN 4:31:15 PM 13-02-2026

Exercise : Monitor an application with autoinstrumentation

The screenshot shows the Microsoft Azure portal interface for the 'Mayuresh-monitorapp' Web App. The left sidebar contains navigation options like Overview, Activity log, Access control (IAM), Tags, Diagnose and solve problems, Microsoft Defender for Cloud, Events (preview), Resource visualizer, Deployment, Deployment slots, Deployment Center, Settings, Performance, App Service plan, Development Tools, API, Monitoring, Automation, and Support + troubleshooting. The main content area displays the 'Essentials' section with various properties and monitoring options. The 'Properties' tab is active, showing details such as Resource group (rg-myWebApp), Status (Running), Location (Central India), Subscription (Azure subscription 1), Subscription ID (61bf8b45-2d23-414d-8778-1968e966b7d2), and Tags. The 'Monitoring' tab is also visible, showing the 'Web app' section with Name (Mayuresh-monitorapp), Publishing model (Code), Runtime Stack (Dotnet - v8.0), and Deployment Center. The 'Deployment Center' section shows the last deployment (Loading deployments...) and the deployment provider (None). The 'Application Insights' section shows the name (Mayuresh-monitorapp) and the virtual IP address (104.211.97.138). The 'Networking' section shows the virtual IP address (104.211.97.138) and the outbound IP addresses (40.81.248.143, 104.211.97.159, 104.211.97.161).

The screenshot shows the Azure Cloud Shell terminal interface. The terminal displays the following commands and output:

```
mayuresh [ ~ ]$ mkdir blazor
cd blazor
mayuresh [ ~/blazor ]$ dotnet new blazor

Welcome to .NET 9.0!
-----
SDK Version: 9.0.308

Telemetry
-----
The .NET tools collect usage data in order to help us improve your experience. It is collected by Microsoft and shared with the community. You can opt-out of telemetry by setting the DOTNET_CLI_TELEMETRY_OPTOUT environment variable to '1' or 'true' using your favorite shell.

Read more about .NET CLI Tools telemetry: https://aka.ms/dotnet-cli-telemetry

-----
Installed an ASP.NET Core HTTPS development certificate.
To trust the certificate, run 'dotnet dev-certs https --trust'
Learn about HTTPS: https://aka.ms/dotnet-https

-----
Write your first app: https://aka.ms/dotnet-hello-world
Find out what's new: https://aka.ms/dotnet-whats-new
Explore documentation: https://aka.ms/dotnet-docs
Report issues and find source on GitHub: https://github.com/dotnet/core
Use 'dotnet --help' to see available commands or visit: https://aka.ms/dotnet-cli

An issue was encountered verifying workloads. For more information, run "dotnet workload update".
The template "Blazor Web App" was created successfully.
This template contains technologies from parties other than Microsoft, see https://aka.ms/aspnetcore/9.0-third-party-notices for details.
